

Exploring SAT Scores Nationwide in 2001

DC-DSI 4
March 2017

Joshua Sparks

Overview

- Look back at SAT data from 2001, specifically:
 - Average Math score
 - Average Verbal score
 - Participation rate (%) among eligible students

Overview

- Data setup:
 - CSV file with all values present, and appropriate (not out of range)
 - Evaluated each group to view distributions

Average Participation Rate

Overall, in roughly half the states more than >50% of students take the SAT

Average Participation Rate

- Sourcing a 2001 article, this reflects the comparison versus the ACT.

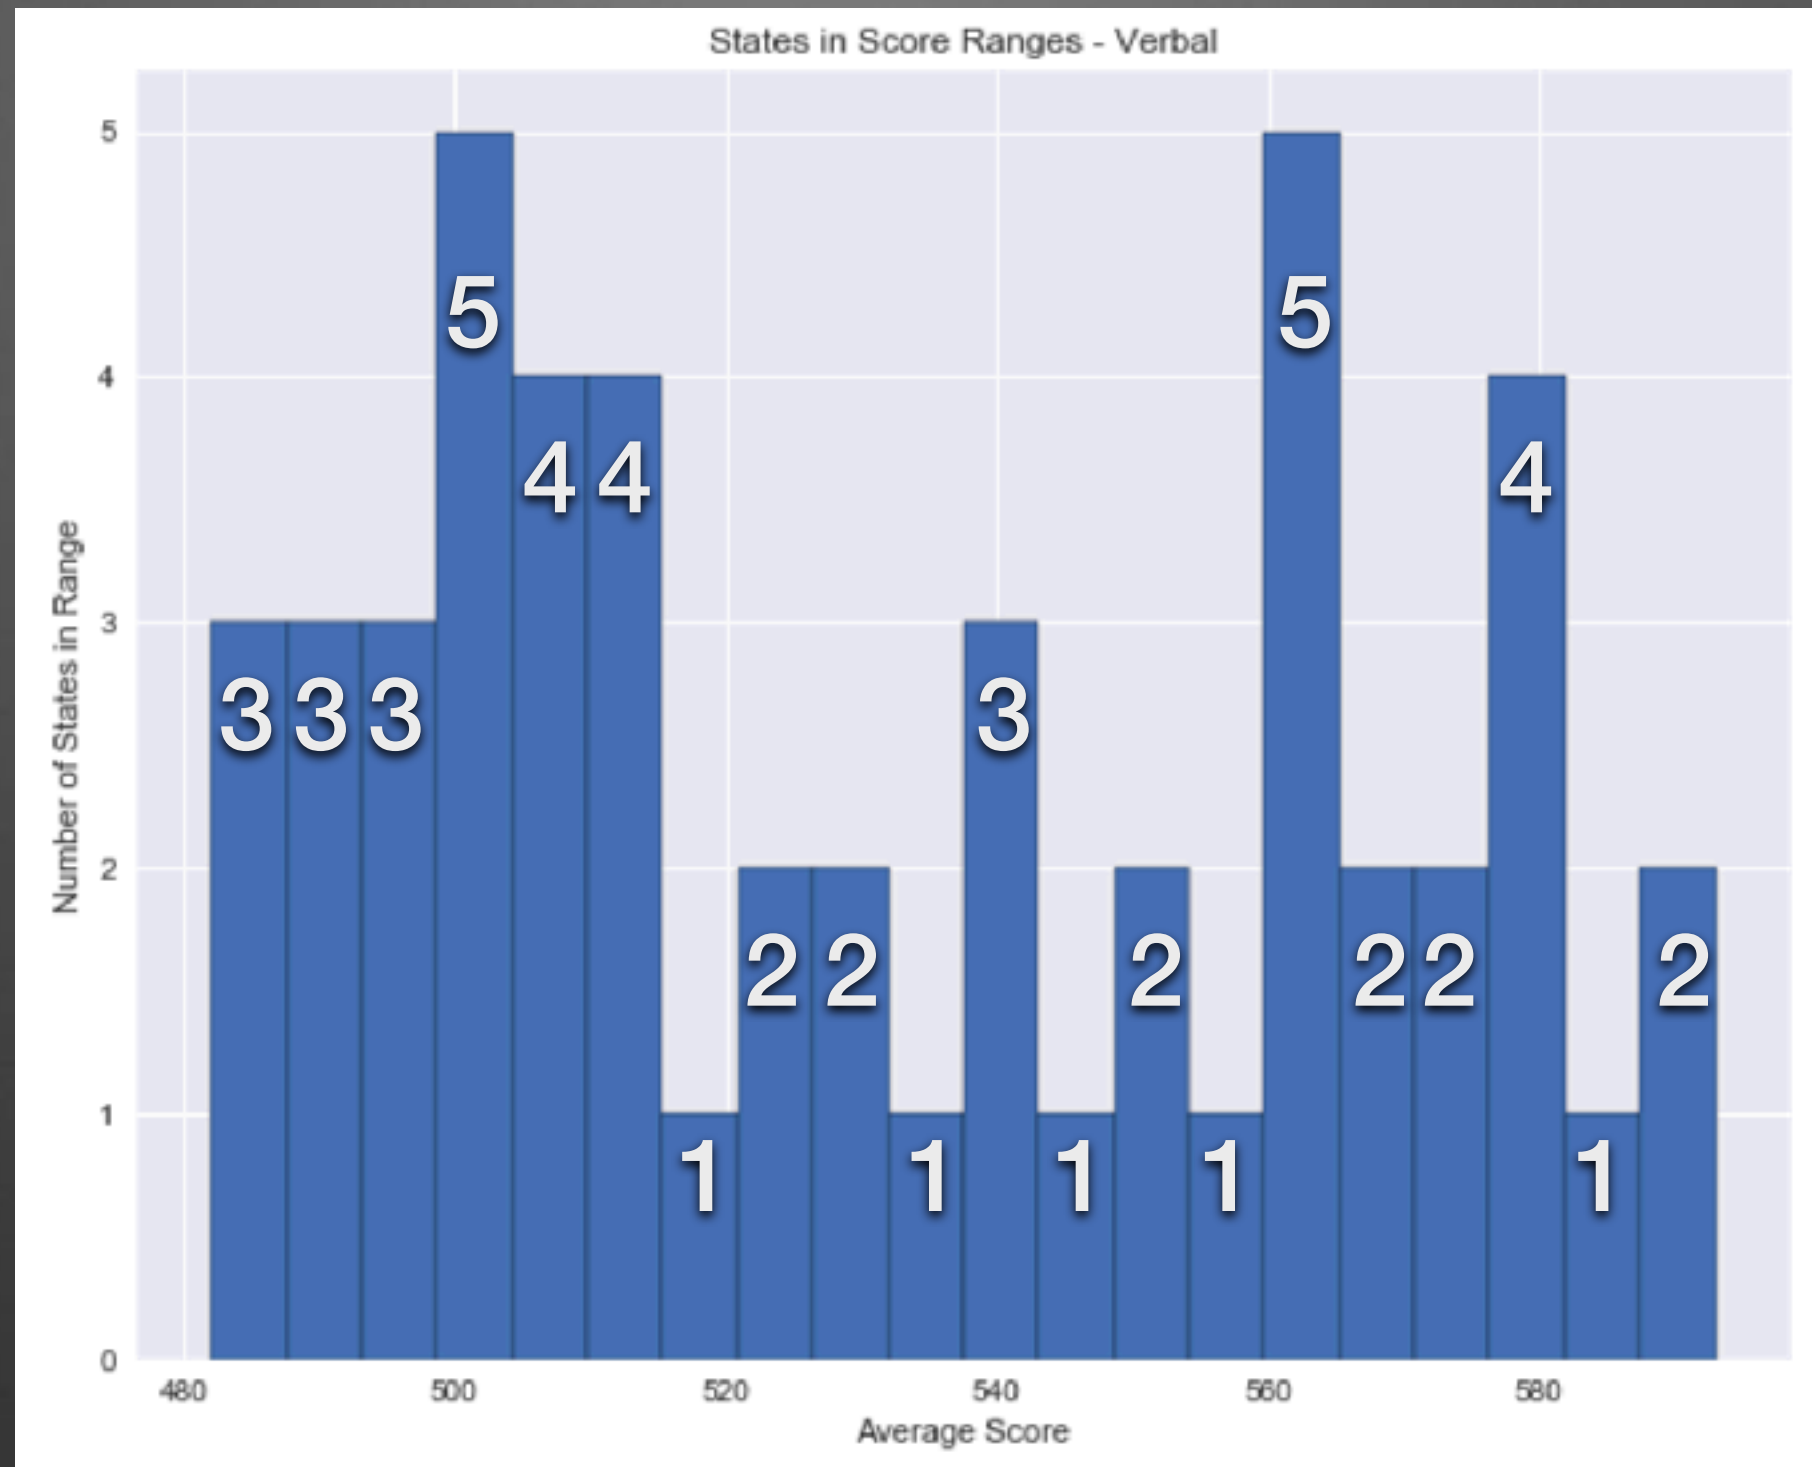

Average Math Score

- Skewed left, with a few low scoring states

- Lowest State: OH
- Highest States: WI, ND, IA

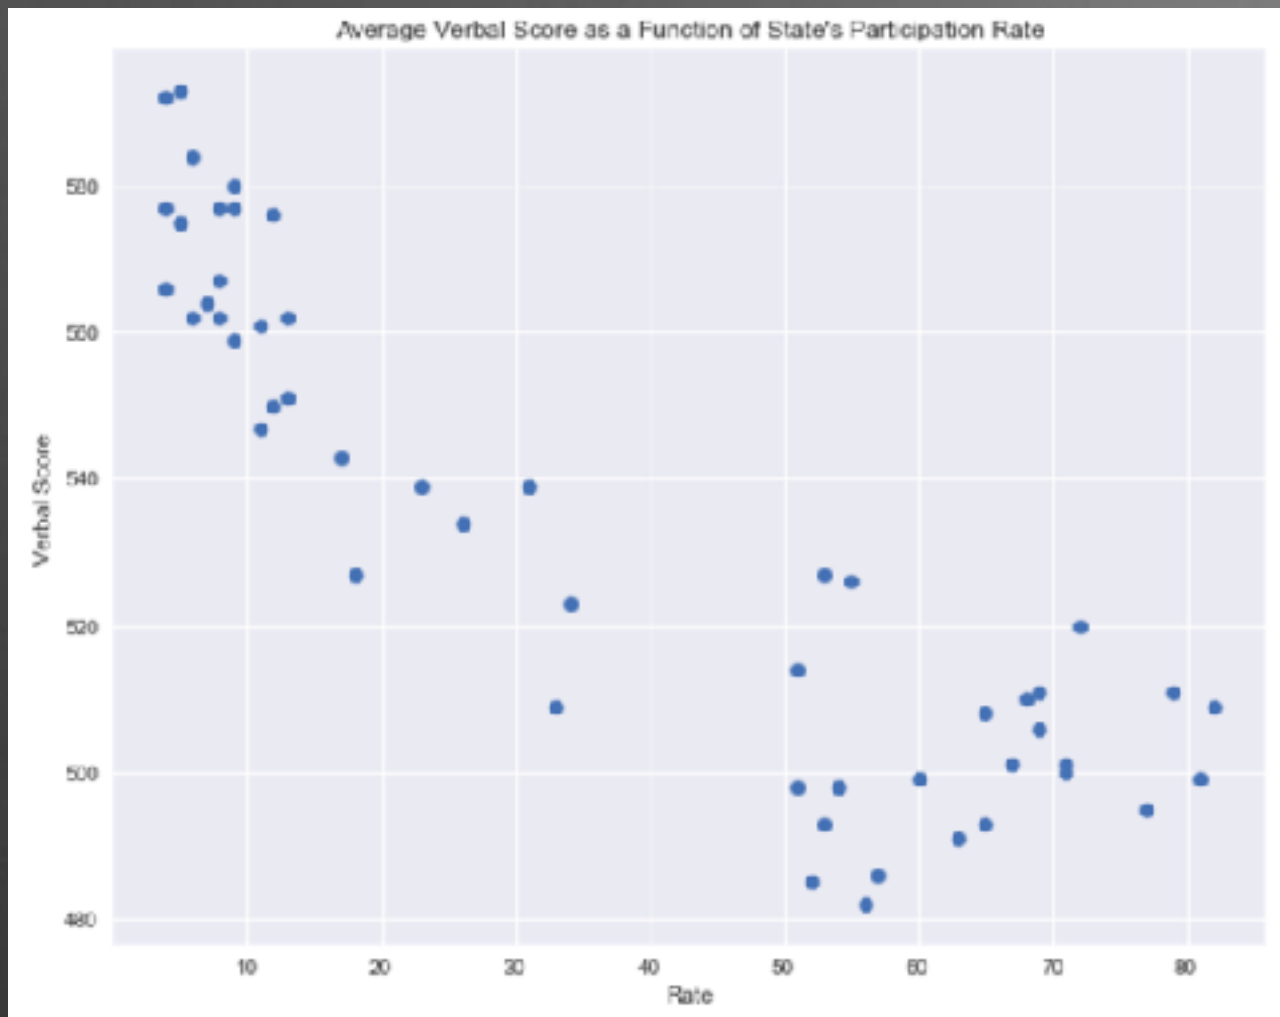

Average Verbal Score

- Skewed left, with a few low scoring states

- Lowest State: “DC”, HI, SC
- Highest States: ND, IA

Linking Participation Rate and Test Sections

- Overall, lower participation rates correlate with higher scores

Takeaways

- Scores seem to show bimodal distribution
- High scoring states tend to have low participation rates
- Possible connection with IA

Future Directions

- Evaluate acceptance rates of schools in states that favor the SAT
- Explore in context of out-of-state applicants from low-participation-rate SAT states
- Similar analysis of ACT scores
